

Step by Step Guide - React & Redux App

Planning Stages

- ① Identify what each view should look like
- ② Break each view into a hierarchy of Comps.
- ③ Determine Events Happen in the App
- ④ Determine what data lives in the Store

① Identify what each view should look like
(draw all of the view of the App)

① First view: Login View ^{index.js} & Login class ^{class.js}

② Second view: Home View

التاريخ: unanswered ques

III Poll : Third view (Unanswered)

NAV Bar

Author name	
(pic)	word
	0
Submit	

IV Fourth view: Results (Answered)

NAV Bar

Author	Results
(pic)	

Text (op.1)
loading Bar

No of votes

V Fifth view: ~~Un~~ answer ques

NAV

write
on

VI Sixth view: Leader board.

NAV

name	Ans	unAns	Sum

Sum (Ans + unAns)

VII Seventh: New card

2) Break Each View into a Hierarchy of Comps.

I) Components of Login View.

App
React Comps. -

- Login overall Comp Container
- Header Some Title
- Form

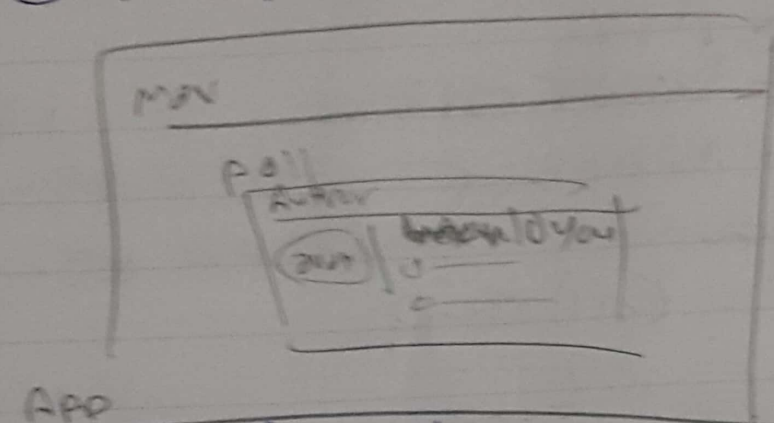

II) Components of Home View

Comps.

- NavBar
- List of polls (Ans/unAns)
- poll
- APP

III Comp of poll

Comp of Results

- Nav
- poll (Grid)
- App

IV Comp of Results :

comp of result

- App
- Nav Bar
- Results (Grid)

V Comp of Leader board -

Next Comp:

- App
- Leader card
- Nav bar

VI New Card Comp

- Next Comp
- APP
 - Nav
 - New Card

VII Poll (to 4) 404

All Components

- App
- Login
- Home
- Nav Bar
- List of polls
- Ans
- Un Ans

- poll
- result
- Leaderboard
- 404

• New Poll

③ Determine what Events happen in the App

① App 1:

- get Users : RECEIVE_USERS
- get Questions : RECEIVE_QUESTIONS

② Login:

- get Users : RECEIVE_USERS
- Set authUser : SET_AUTHED_USER

③ Home (List of polls)

- Unanswered Qs : get unanswered Questions
- Answered Qs : get Answered Questions

④ poll view → get user of Users
→ get question of Questions

⑤ poll question → get authUser
→ get Questions
→ set option

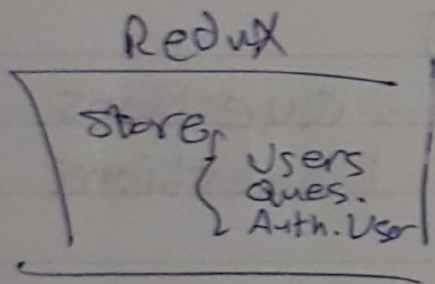

⑥ Result : → get question of Questions

⑦ New poll → get current AuthedUser
→ set text

⑧ Leaderboard → get Users

[4] Determine what data lives in the store:-

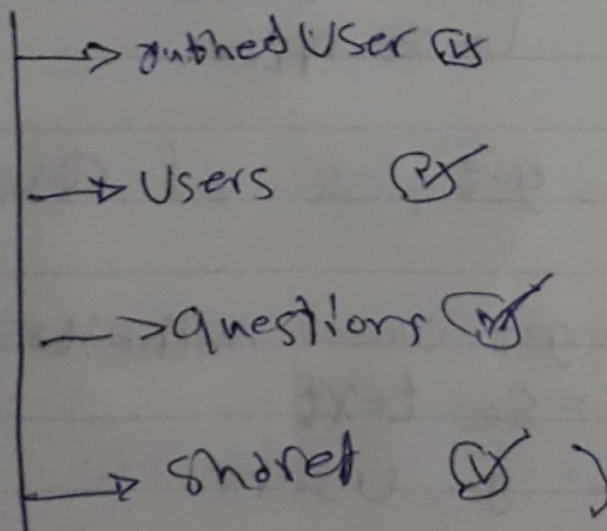

- I) Users & Actions : globally used → Redux store
- II) Authed User → " " → Redux store
- III) text of options → only used in Newpoll Gmp → UI state
- IV) Options data (answered) → only used in result → UI Gmp.

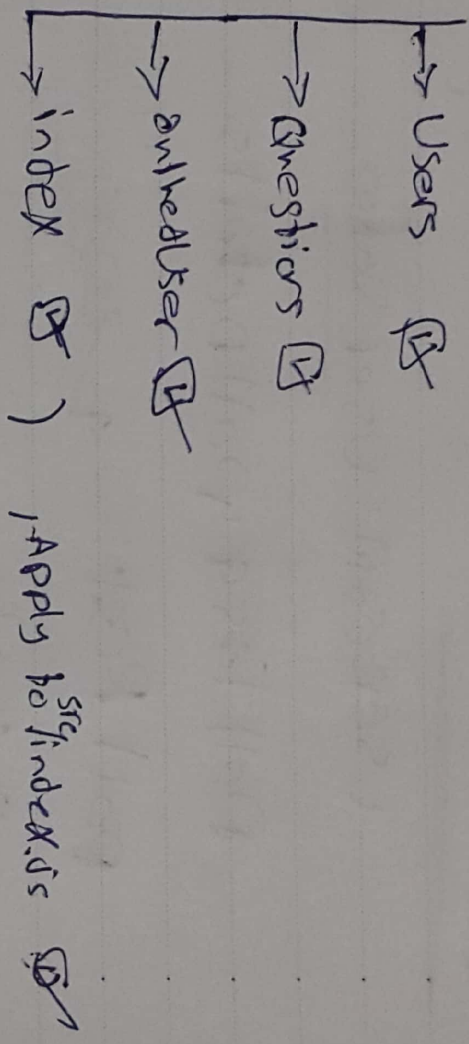

coding stages.

① api.js :- ✓

② Folder (actions :- ✓)

③ Folder (Reducers)

④ Folder (Middleware):

⑤ Folder (UI Components)
